Name: Armie Perez

Subject: Comments on 2020 study

Message: 1. The scenarios to be consider should take into account the fact that RETI did not do actual power flow studies. Therefore, the projects proposed as part of the several CAISO open windoes should also be studied to properly determine which sets of transmission lines does the job of delivering renewables at the most economic price.

2. The Green Path north project should be removed from all the studies 3. CTPG should take into account the projects that are being prosed as part of the CAISO studies for the cluster windows.
